Markdown Cheat Sheet

Markdown is a way to format text using simple symbols. Here's a guide to help you create nicely formatted text without needing special software.

1. Headings

Use the # symbol to create headings. The more # symbols, the smaller the heading.

plaintext

Big Heading
Medium Heading
Small Heading

2. Bold and Italic

Bold text by wrapping words with double asterisks: **bold**.

Italic text with single asterisks: *italic*.

plaintext

This is bold
This is italic

3. Lists

Unordered List: Use dashes - or asterisks * for bullet points.

```plaintext
- First item
- Second item
```

Ordered List: Use numbers followed by a period.

```plaintext
1. First item
2. Second item
```

4. Links

Create a link using square brackets [] for the text, followed by the URL in parentheses ().

```plaintext
[Visit Google](https://www.google.com)
```

5. Images

Add an image using an exclamation mark !, followed by alt text in brackets, and the image URL in parentheses.

```plaintext
![Description of image](https://example.com/image.jpg)
```

6. Blockquotes

Use the > symbol to create a blockquote for emphasizing quotes or important information.

plaintext

> This is a quote.

7. Horizontal Line

Create a horizontal line with three dashes ---

plaintext

---
8. New line
Two spaces at the end of line then press enter
